Summary

I'm a web developer who's passionate about finding quick solutions to problems. I work well in team settings, and have a history of being able to troubleshoot programming challenges easily in collaborative work. Using programs like HTML, CSS, JavaScript, ReactJS and Api. I have built projects that app services and desktop sites still use today, I meet continuous high standards for web design and development both from Frontend and backend, and hope to continue doing so in any open position either frontend or backend ASP.

Skills
HTML5
CSS3
Flexbox
Responsive Design
JavaScript (all 2022 modern syntax, ES6, ES2018, etc.)
